

Period of Activity

05/2025 - 09/2025

Gabriel Corsi Honório

Personal information

I am a Brazilian electrical engineering student at the Federal University of São Carlos, currently enrolled in a dual degree program at ENSTA Paris.

Driven by a passion for learning, I am constantly working to strengthen my skills and turn challenges into opportunities for growth. I pride myself on being resilient and self-taught across a variety of fields.

I am actively seeking a research internship opportunity from May to September 2025.

"As long as you live, keep learning how to live" - Sêneca

Personal Website

LinkedIn

Skills

Programming

Python, JavaScript, CSS, HTML, C/C++, AMPL, MATLAB

Softwares

SIMULINK, Proteus, LTspice XVII, AutoCAD, Fusion 360, Inventor, CADSIM, ArduinoIDE

Embedded Systems

Arduino, Esp Family (32, 8266)

Softskills

Strong communication, group leadership, creativity, and project management skills.

Languages

Portuguese (fluent)

English (Intermediate)

French (Intermediate)

The Study Experience

Projet d'Ingénieur en Equipe 11/2024 - Present

- Leadership of the 24/25 team for an autonomous vehicle race competition.

Scientific research 06/2023 - 07/2024

- Research on the sizing of a Residential Battery Energy Storage System for Revenue Maximization in Electricity Markets, considering stochastic solar photovoltaic generation.

Completion of course work 01/2020 - 12/2020

- Design of a vertical wind turbine using simple resources to popularize residential energy production.

High school robot battle 01/2019 - 05/2019

- Robot battle competition with balloons.

Education

Diplôme d'Ingénieur - Computing 09/2024 - 07/2026

École Nationale Supérieure de Techniques Avancées

Electrical Engineering Degree 08/2021 - after ENSTA

Federal University of São Carlos

Mechatronics Technician 01/2018 - 12/2020

ETEC Professor Basilides de Godoy

Skills

Programming

Python and MATLAB for data manipulation, mathematical calculations, statistical simulations, and machine learning. Experienced with tools such as Pandas, NumPy, Matplotlib, SciPy, StatsModels, Seaborn, PyTorch, etc.

Experienced in C/C++ for embedded systems and object-oriented programming projects.

Skilled in JavaScript, CSS, and HTML for website creation and customization.

Familiar with AMPL and Pyomo for operations research and optimization algorithms.

Electronics and Control

Proficient in software tools like SIMULINK, Proteus, LTspice XVII, and CADSIM for circuit simulation, component analysis, and PCB design.

Skilled in designing and implementing electronic circuits using transistors and operational amplifiers for converters, amplifiers, regulators, and more.

Experienced in system modeling and the development of classical control.

Embedded systems

Hands-on experience with microcontrollers such as Arduino and the ESP family for robotics projects, sensor reading, actuator control, and residential IoT applications based on HTTPS communication.

3D Modeling

Proficient in using software like Fusion 360 and Inventor for designing parts and mechanisms.
