

Period of Activity

04/2026 - 10/2026

Gabriel Corsi Honório

Personal information

I am a Brazilian electrical engineering student at the Federal University of São Carlos, currently enrolled in a dual degree program at ENSTA Paris. Driven by a passion for learning, I am constantly working to strengthen my skills and turn challenges into opportunities for growth. I pride myself on being resilient and self-taught across a variety of fields. I am actively seeking a internship opportunity from April to October 2026.

" As long as you live, keep learning how to live" - Sêneca

Resources

🕒 Softwares
SIMULINK, Proteus, LTspice XVII, AutoCAD, Fusion 360, Inventor, CADSIM, ArduinoIDE
🕒 Softskills
Strong communication, group leadership, creativity, and project management skills.

Languages

🇧🇷 Portuguese (fluent)
🇬🇧 English (Intermediate)
🇫🇷 French (Intermediate)

Professional Experience

Embedded Systems Intern – SNCF 05/2025 - 08/2025

- Developed a railway track inspection test bench, creating a state machine on STM32 for motor control and synchronized data acquisition. Integrated hardware and software via CAN, I2C, USART, and Ethernet, and built a Python/ROS 2 interface for real-time control and monitoring.

Academic Experience

Autonomous Vehicle Competition 11/2024 - 05/2025

- Project Leader of a 16-member team to develop a modified RC car with LIDAR-based navigation. Managed project planning, coordinated area leads, and ensured integration.

Scientific research 06/2023 - 07/2024

- Research on the sizing of a Residential Battery Energy Storage System for Revenue Maximization in Electricity Markets, considering stochastic solar photovoltaic generation.

Completion of course work 01/2020 - 12/2020

- Design of a vertical wind turbine using simple resources to popularize residential energy production.

Education

Diplôme d’Ingénieur - Computing 09/2024 - 07/2026

École Nationale Supérieure de Techniques Avancées

Electrical Engineering Degree 08/2021 - after ENSTA

Federal University of São Carlos

Mechatronics Technician 01/2018 - 12/2020

ETEC Professor Basilides de Godoy

Skills

Programming

Python & MATLAB for data analysis, simulations, and ML (Pandas, NumPy, Matplotlib, PyTorch, etc.).
C/C++ and FreeRTOS for embedded systems. JavaScript, HTML, CSS for website development.
AMPL & Pyomo for optimization modeling.

Electronics & Control

Design and implementation of analog/digital circuits (amplifiers, converters, regulators).
Experienced in system modeling and the development of classical control.

Embedded Systems & Robotics

Experience with Arduino, ESP & STM32 for IoT and robotics. ROS 2 integration, CAN, I2C, USART, and Ethernet communication.
Sensor acquisition (accelerometers, encoders, Lidar), real-time data synchronization, and motor control.s
3D Modeling for part and mechanism design (supports, housings, assemblies).
